Overview

Every maker can leverage the power of mixed reality to extend their Power Apps with the ease of drag-and-drop development. With these capabilities, makers can digitize workflows in physical space in new and innovative ways using the mobile devices they already have on-hand.

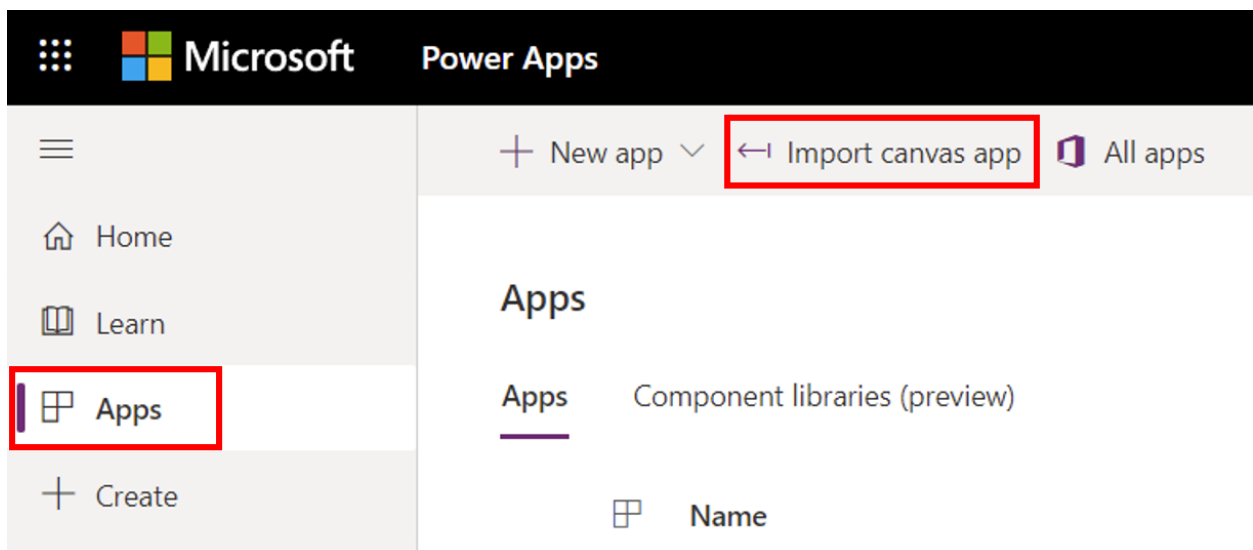

Mixed reality is being used today to increase sales conversion, improve customer satisfaction, and optimize brand performance. Now you can too without needing a team of mixed reality experts thanks to the no / low-code Power Apps mixed reality components that are included as a standard capability.

The mixed reality sales sample app illustrates how mixed reality might be incorporated into a salesperson's workflow. This app can easily be extended to pull in related CRM/ERP data through connectors as well as to export into reports for post-sales actions like opportunity pipelines and installation approvals/dispatch.

Installation

The sample app is included as a .zip file located [here](#).

1. Download the sample app
2. Navigate to <https://create.powerapps.com> and navigate to the environment you want to install the sample app in
3. Go to the **Apps** page using the left-hand navigation bar
4. Click **Import canvas app** in the top left
5. Upload the sample app from step 1
6. Press **Import** in the bottom right

Import package

Import canvas app created outside of a solution into this environment. Apps created in a solution can be imported under Solutions. [Learn more](#)

Sales Sample App

The Mixed Reality Sales Sample app has 5 screens:

- **Home** – Splash screen where a user can start a new mixed reality sales session.
- **Display page** – Gallery showcasing the different products that can be visualized. Tapping on any of the products pops up a window where a 3D model of the product can be interacted with. This gallery is populated in the sample app using a hardcoded collection

that is generated OnAppStart, but can be pulled from any connector like SharePoint, SQL, Dataverse, etc.

- **Filter page** – Navigate to this page using the **Filter** icon on the **Display page**. Used to filter the gallery to only products that will fit into the designated dimensions. These dimensions can be gathered in the physical world using mixed reality.
- **Photos page** – Shows all the photos captured during the mixed reality session
- **Full Screen Photo page** – The full screen version of the photo that is shown when a photo is tapped on in the **Photos page**. This photo can be shared via various connectors like Teams, Dataverse, etc. The buttons on this page do not work, but can be enabled by following this [documentation](#).
